

## 1.4 Environmental Policy

The following policy underpins the company's commitment to the environment.

"Water Solutions is committed to carrying out its business operations in a manner that minimises any harmful impacts on the environment whilst making the most efficient use of natural resources. Its core business operation relating to the supply, fitment and servicing of water free urinal valves is continually reviewed to ensure that its application results in minimal impacts on the environment through prevention of pollution. In setting its own environmental emission objectives and targets via its management system the company ensures that any emissions waste or usage of natural resources are closely controlled and reviewed so as to ensure that it continues to improve its environmental performance wherever there is the potential to do so, and as such the company will:

- Adopt environmental best practices throughout its operation
- Use materials from sustainable resources wherever practicable
- Ensure all company vehicles meet or exceed emission standards
- Minimise waste and use recycling schemes wherever appropriate
- Ensure all cleaning agents used present minimal or no harmful impact on the environment
- Respect any environmental policies stipulated by clients

The company is committed to meeting all relevant legislation relating to the environment as well as any other requirements relating to its business. This policy is communicated to an external audience via the company web site as well as to any other personnel who may work with or on behalf of the company.

This policy is achieved through the implementation and continuous development of an Environmental Management System (EMS) that meets the requirements of the international Standard ISO 14001:2015, as well as any statutory requirements that may apply to the business."
